

Solution Requirements

Date	26 june 2026
Team ID	SWTID-2026-8613
Project Name	Personalized Networking Assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:-

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR):-** Functional requirements describe the main features the Personalized Networking Assistant must provide to help users connect, communicate, and network effectively.
- **Non-Functional Requirements (NFR):-** Non-functional requirements describe how the Personalized Networking Assistant should perform by ensuring security, speed, reliability, usability, and scalability.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1.	Authentication	Users can securely register and log in using their email and password before accessing personalized networking features.	High
2.	Authorization Levels	Registered users can access their profiles, networking suggestions, conversation history, and saved events. Administrators can manage system settings and user data.	High
3.	External Interfaces	The system integrates with GPT API for AI-generated conversation starters and SQLite database for storing user profiles, event details, and conversation history.	High

4.	Transactions Processing	The system receives event details, processes the request, generates personalized conversation starters, verifies the response, and stores the interaction in the database	High
5.	Reporting	The system displays the detected event theme, personalized conversation starters, and previous conversation history for the user.	Medium
6.	Business Rules	Conversation starters are generated only after validating the event description. Responses are personalized according to user preferences and event context.	High
7.	Compliance to Laws or Regulations	The system protects user information, stores only required data, and follows standard data privacy and security practices.	High
8.	Other	Users can review previous conversations and reuse networking suggestions for future events.	Medium

Step 2: Non-Functional Requirements (NFR)

S.NO	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1.	Performance & Speed	The system should generate networking suggestions quickly with minimal waiting time.	Response generated within 3 seconds .
2.	Scalability	The system should efficiently support multiple users simultaneously without performance degradation.	Supports 100+ concurrent users .
3.	Security & Data Privacy	User accounts, conversation history, and event details must be stored securely with proper authentication.	Encrypted passwords and secure database storage.

4.	Reliability & Availability	The system should remain available and provide consistent service with minimal downtime.	99% system availability.
5.	Usability & Accessibility	The application should provide a simple, responsive, and user-friendly interface for users with different technical backgrounds.	Users can complete networking tasks in a few simple steps.
6.	Other	The system should be modular and easy to maintain, allowing future integration of new AI models and networking features.	Modular architecture supporting future updates.
