Team ID	SWTID-2026-8613
Project Title	Personalized Networking Assistant
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed solution aims to help users network more effectively by generating AI-powered personalized conversation starters based on event details and interests. The application also provides Wikipedia-based fact verification, networking history, and a feedback system to improve future conversation suggestions.

Project Overview	
Objective	To help users confidently connect with people at networking events by providing AI-generated conversation starters and reliable topic verification.
Scope	The application enables users to enter event details, generate personalized conversation starters, verify facts using Wikipedia, maintain networking history, and provide feedback for continuous improvement.
Problem Statement	
Description	Many people find it difficult to start meaningful conversations and verify information while attending networking events. This often leads to missed opportunities and low networking confidence.
Impact	The proposed solution improves networking confidence, saves time, encourages meaningful professional interactions, and provides reliable information during conversations.
Proposed Solution	

Approach	Develop an AI-powered networking assistant using FastAPI, Streamlit, and Wikipedia API to generate personalized conversation starters, verify facts, maintain networking history, and collect user feedback.
Key Features	• AI-powered personalized conversation starters • Event and interest-based suggestion generation • Wikipedia fact verification • Networking history management • Feedback system • Streamlit user interface

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU specifications, number of cores	Intel Core i5 (4 Cores) Above + Integrated GPU
Memory	RAM specifications	8 GB RAM
Storage	Disk space for data, models, and logs	256 GB SSD
Software		
Frameworks	Python frameworks	FastAPI, Streamlit
Libraries	Additional libraries	SQLAlchemy, Requests, Wikipedia-API, Pytest, Unicorn
Development Environment	IDE	Visual Studio Code (VS Code)
Data		
Data	Source, size, format	User Input, Wikipedia API, SQLite Database (JSON/Text)
